

1. Create a modal with 50% view width and 100% view height that slides in from the right or left of its device. Its content should be scrollable on the Y axis alone and should have backdrop. This modal should be closed on a button click.
2. Create a table with 5 columns (s/n, name, description, date, action), populate the description table with lorem ipsum (300).
 - Display only 50 of these description characters on the table.
 - On hover over the 50 characters a preview of the entire description(ie the entire 300 characters should show).
 - On click on the action button for that particular row, The entire data should be displayed.

NOTE – Keep ur designs very simple using any tool @ your disposal. If you must use a js framework / library go with react

Goodluck
